

CLAIMS

1. We claim that the JMAC system is the first to use a universal cap and the container that the oil, fluid or solvent comes in, as a backup reservoir to be pumped from.
2. We also claim to be the first to use a universal engine oil cap to pump oil through into the top of an engine.
3. As well we claim the bag style holder for the container to be a first of its kind.

In conclusion, the JMAC system was created as a customer friendly backup oil supply system, in the event an engine's oil supply would become dangerously low in or at an inconvenient time or place.
